

ATOMiK Patent Summary For Investors

Last updated: 2026-05-28

Controlled diligence summary. Use this before circulating the full provisional patent. This is not legal advice and does not replace counsel review.

Title

ATOMIK: An Externally Stateless, Delta-Driven Computing Architecture for Deterministic State Evolution

Filing Status

Provisional patent filed. See controlled legal/IP materials for filing receipt and detailed application materials.

Inventor

Matthew H. Rockwell, subject to counsel review of final assignment chain and post-close entity destination.

High-Level Subject Matter

The filing describes a computing architecture and state-management approach using deterministic state transitions and delta representations. The investor-safe summary is that ATOMiK separates known reference state from accumulated meaningful change, then reconstructs state at defined boundaries when needed.

What It May Cover

Potential coverage areas may include architecture-level treatment of reference state plus accumulated deltas, deterministic state evolution, state transition boundaries, and related implementation patterns. Final claim scope, patentability, and enforceability require counsel review and prosecution.

What It Does Not Prove

- It does not prove patentability, claim breadth, freedom to operate, or non-infringement.
- It does not prove production readiness.
- It does not prove customer workload value.
- It does not prove battery, heat, cooling, water, power-bill, or footprint savings.
- It does not prove that every implementation of state-aware compute is covered.

Counsel-Review Caveat

Do not infer patent strength, claim breadth, freedom-to-operate, or final IP ownership from a provisional filing alone. Patent conversion, prior-art review, assignment chain, trade-secret controls, and licensing posture remain counsel-review workstreams funded in the pre-seed plan.

Conversion Deadline / Target Date

To be confirmed by counsel from the official filing date and docket. Keep the exact deadline in the legal/IP attachment index once counsel confirms it.
