

ATOMiK — One Page Overview

ATOMiK · State-Aware Compute Architecture · Pre-Seed · May 2026

ATOMiK makes change the unit of compute.

State-aware compute evaluation for edge and embedded teams constrained by battery, heat, bandwidth, latency, reliability, or hardware footprint.

Problem

Many constrained systems repeatedly move, scan, sync, replay, or rebuild state even when only a compact change matters. That can become battery pressure, enclosure heat, link budget, latency, reliability risk, or hardware overbuild.

Offer

Bring one state-heavy workload, one current baseline, and one painful constraint. ATOMiK evaluates wasted state movement and returns a workload map, baseline comparison, evidence map, fit/no-fit recommendation, and next-step plan.

Proof Today

Zynq Desk v0.39-K	HARDWARE_VALIDATED
Linux userspace-to-FPGA + 16/16 checks	HARDWARE_VALIDATED
AX7020 board-run matrix	LIVE_MEASURED with caveats
Formal proof foundation	FORMAL_PROOF where directly audited; otherwise SOFTWARE_VALIDATED
SD boot artifacts	BUILD_ARTIFACT until power-on run artifact exists

Pre-Seed Ask

Target	\$2.0M pre-seed; \$1.25M minimum; \$2.75M stretch
Funds	\$600K engineering, \$400K customer proof, \$300K IP/legal, \$300K ASIC feasibility, \$400K ops/reserve
Milestone	Measured workload proof + IP packet + ASIC feasibility; no tape-out
Need	Capital, design-partner introductions, qualified workloads

Evidence Boundary

No claimed universal speedup, production readiness, guaranteed battery/heat/water/cooling savings, smaller hardware, signed traction, or funded tape-out. Final SAFE terms require CFO/counsel approval.
